Integration of cab label printers in SAP® systems

SAPscript currently has no printer drivers available for label printers. In the following we tell you how to print labels out of SAP® on cab devices and systems yet.

SAPscript

- Method 1: Integration of cab JScript in a SAPscript form. Device type is LB_CAB, "passing through" the data from the SAPscript form.

  SAPscript incl. JScript → device type LB_CAB → spool administration → cab label printer

- Method 2: Device type SWIN/SAPWIN in connection with SAPSprint and Windows driver

  SAPscript → device type SWIN/SAPWIN → spool administration → cab label printer
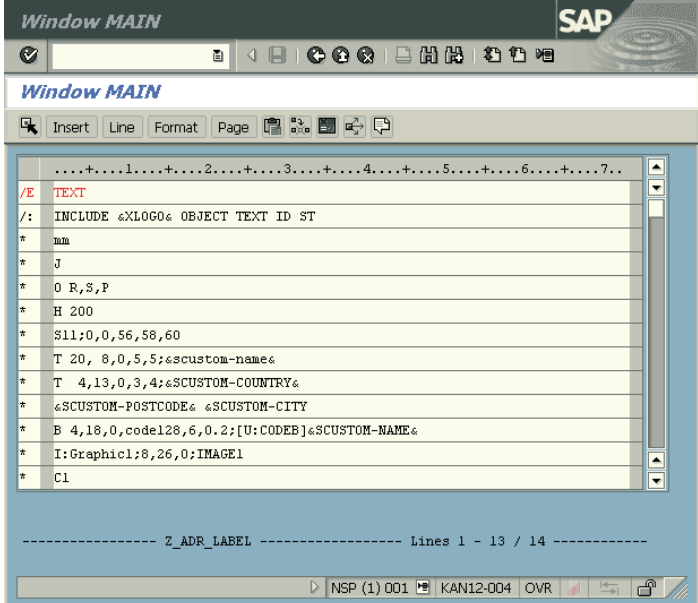

Smart Forms

- Method 1: Integration of cab JScript in a Smart Forms report. Device type is LB_CAB, "passing through" the data from the Smart Forms report.

  Smart Forms incl. JScript → device type LB_CAB → spool administration → cab label printer

- Method 2: Device type SWIN/SAPWIN in connection with SAPSprint and Windows driver

  Smart Forms → device type SWIN/SAPWIN → spool administration → cab label printer

SAPscript example

Adobe Interactive Forms

This solution uses Adobe® software integrated in the SAP® system. Interactive forms can be generated in PDF format.

Upon receipt of the PDF the SAP® system extracts the data stored in the form for further processing. Output is done via the SAPPDFPRINT (→ **http://bit.ly/1eBUwa2**) service and the Windows driver.

SAP® add-on: Global Label Management (GLM)

In order to use all functions of this add-on, various SAP® components are required. SAP® provides information on this website: **http://bit.ly/1JR8cJg**

i As a Silver Level member in the SAP® Printer Vendor Program cab has access to SAP® development environments for optimum printer support.
